

PLEASE MAKE SURE THAT YOU HOLD DOWN ALL CONTROLS BECAUSE ONE CLICK/MOVE WILL NOT REGISTER.

Click **E** to add a letter to your message

Click **F** to review your message

Click **G** to reset your message

Click **D** to send your message to any other micro:bit running the send and receive code or just the receive code.

Use the joystick to change the letter that you want to add

You can use the receive and it will work for both.

Put the Send and Receive on the joystickbit

Put the receive on any regular micro:bit

You need two micro:bits for this to work.

For the receive file, here are the options to send back messages:

A=Yes

B=NO

A+B=(Angry Emoji)

Logo=Maybe

When you send a message via the receive it will still send to everyone on the radio.
